ABDELLATIF EL FAGROUCH

Full-Stack Developer

Khouribga, Morocco | +212 632 633 751 | elfagrouch9@gmail.com
Portfolio: chidori42-github-io.vercel.app | GitHub: github.com/Chidori42

SUMMARY

Full-stack developer with advanced Software Engineering training at 1337 (42 Network), currently completing a graduation internship at Somayar on a production e-ticketing platform for transit networks. Comfortable across React/Next.js, NestJS/Node.js, PostgreSQL/Prisma, Docker, and Socket.IO, with a strong systems-programming foundation in C/C++ and Unix internals. Builds and ships full-stack products from architecture and security hardening through deployment and CI/CD.

EXPERIENCE

Full-Stack Developer Intern (PFE) — Somayar *2025 – Present*
Transit ticketing, GPS fleet management & radiocommunications company

- Building ETICKETPRO, an e-ticketing platform for a BRT transit network, on a NestJS + Next.js 14 monorepo with PostgreSQL/Prisma, Docker, and Socket.IO.
- Designed and shipped a 4-zone fare engine (Z1–Z4) with corridor-distance ordering and runtime configuration validation, replacing manual pricing with automated zone-based ticket issuance.
- Modeled and integrated GTFS transit data — 288 stops across multiple routes — into 6 Prisma models with an idempotent seed pipeline and a referential API layer.
- Architected the real-time vehicle tracking pipeline (Redis cache → Socket.IO push → Leaflet map interpolation) powering live GPS fleet visibility.
- Rebuilt core map and stop-search UX under the company's design system, adding full keyboard navigation and ARIA accessibility support.

PROJECTS

Hirefy (ft_transcendence) — Applicant Tracking System

- Built a full-stack recruitment platform (React/TypeScript, Node.js/Express, FastAPI, Prisma, MariaDB, Docker Compose, Kubernetes) with role-based access for recruiters and candidates.
- Improved applicant-filtering query performance by 40% by optimizing Prisma ORM data access patterns.
- Ran multiple security audits and remediated authentication and secret-handling vulnerabilities across the stack.

DakkanPro — Mobile POS & Retail Management

- Built an offline-first mobile POS and shop-management app for small retailers using React Native, Expo, TypeScript, and SQLite.
- Implemented sales, inventory, customer credit, cash sessions, reports, and local backup/restore through feature-based services.

ApplyPilot — Job Search & Application Platform

- Created a local-first job-search platform with a seven-stage application pipeline, CV library, and cover-letter studio.
- Added recruiter email discovery, scheduled outreach, and inbox reply tracking with Next.js, TypeScript, Tailwind CSS, Nodemailer, and IMAP.

IRC Server — Custom C Networking Project

- Implemented an IRC server in C from raw TCP sockets using select()/fd_set, reliably handling 200+ concurrent client connections.

EDUCATION

Software Engineering — Advanced Program — 1337 (42 Network) *Nov 2023 – Mar 2026*
Khouribga, Morocco

- 100% project-based, peer-to-peer curriculum with deep focus on C/C++, algorithms, and Unix systems programming.

DEUG in Law — Faculty of Law (FSJES) *2020 – 2022*
Agadir, Morocco

SKILLS

Languages: TypeScript, JavaScript, C, C++
Frameworks / Web: React, Next.js 14, Node.js, Express.js, NestJS, Fastify, Tailwind CSS
Databases: PostgreSQL, MariaDB, MySQL, MongoDB, SQLite
DevOps / Infrastructure: Docker, Docker Compose, Kubernetes, Nginx, Git, Redis, Socket.IO, Linux (Fedora/Ubuntu)
